

## **GORDON CAMPBELL**

### **CV**

- Gordon is Head of Enterprise section in the EO Science, Applications and Climate Department, European Space Agency, working on EO application developments for more than 20 years. Highlights include initial development and verification of Copernicus services and the integration of EO into Destination Earth (Digital Twin Earth related developments).
- Gordon has been working with European private and public sector stakeholders to develop methods to better integrate information derived from civilian satellite data into a range of application domains including environmental protection, industrial operations, public health, territorial planning and law enforcement/security. Also working to develop improved accessibility, flexibility and content of EO derived information. This includes extensive experience of heterogeneous data fusion including imagery, transponder data, IoT sensor networks, other signal information and open source intelligence datastreams.
